Chapter III

INFORMAL TYPES

We think the Informal Type should be just what the name implies, and should not be determined by size alone. This type would have the florets distinctly staggered up the stem and in most cases the stem will show. Stem more often will be more willowy than that of the Formal Type. Large, over five inches in diameter. Medium, over three inches to and including five inches in diameter. Small, three inches in diameter and smaller.

LARGE INFORMAL

BADGER BEAUTY—(Krueger) 1941 (Minuet x Bagdad). Lavender with creamy white throat. Earlier than Minuet and bulblets germinate much easier. Medium height. Opens five large florets in field on 18-20 bud spike. Really giving Minuet some competition. L., $2.00 ea.; M., $1.50 ea.; S., $1.00 ea. Blts., 1, 20c; 10, $1.60.

KING OF HEARTS—(Salbach) 1939 (Picardy x Grand Opera). A patented gladiolus. Pale vermillion, deepening at outer edges. Soft carmine feathering in throat. SHIRLEY TEMPLE—(Pruitt) 1937 (Picardy x Ruffled Beauty). Light cream with rich golden throat. Beautifully ruffled and of heavy substance. Strong grower. Blooms late mid-season. Will crook in hot weather. Best results can be had by growing from different size bulbs; in that manner you tend to miss the extremely hot weather with some of them. All in all, a wonderful gladiolus. L., 2, 12c, 10, 50c; M., 4, 15c, 10, 30c; S., 10, 15c. Blts., 40, 10c; 100, 30c.

Chapter IV

GENERAL LIST

In 1940 we had 585 varieties and many of them got away from us before we were able to classify them. We firmly resolved that this number of varieties should be drastically cut. We did, and then proceeded to add a lot more so that in 1941 we planted some 690 varieties. Just couldn't resist them, but the same thing happened again, and several missed being classified. FUSARIUM YELLOWS RESISTANT VARIETIES

We are glad to notice that more and more of our outstanding Hybridizers are taking cognizance of the fact that the chances of producing strong, healthy seedlings are much greater if they use parents resistant to Fusarium Yellows. We cannot too strongly urge upon Hybridizers to select Fusarium Resistant parents, protect your crosses from chance pollenation, and make a complete record of your crosses. In that manner we will build up the vigor and stamina of seedlings yet to come, and also be able to study the resistant factor from the records thus obtained. The Michigan State College of Agriculture and Applied Science is doing a job worthy of praise in their extensive tests being run to determine Fusarium Yellows resistance or susceptibility in Gladiolus.

Chapter VI

PLANT FOOD

Late in 1941 we completed the annex to our bulb storage building, which provides ample space to take care of our growth. The whole building and its equipment was designed for the sole purpose of providing as near ideal storage conditions for gladiolus bulbs as possible. It was built new from the ground up according to these plans. Temperature automatically controlled to within 1° F. Humidity also controlled to insure sound, plump bulbs.

CHATELIER'S PLANT FOOD

We have heard considerable about Chatelier's Plant Food in the past, and this last season, we conducted a couple of tests and the results were very satisfactory. We transplanted a lot of Red Raspberry bushes, and one row was handled without treatment, all of them wilted badly and later most of them died on account of the heat and drought. The balance of them were treated with Chatelier's, and the majority of them hardly wilted and not only lived, but put on a strong healthy growth. We also tested the soaking of bulblets, and the results were very noticeable, showing much better returns from those treated.

For general use, one tablet is dissolved per each gallon of water.

60 Tablets, $1.00

HYPONEX

It has been our privilege to see some wonderful results obtained by the use of Hyponex on various plants in greenhouse work. Most luxuriant growth, abundant flowers of much larger size. Our investigation of the efficiency of Hyponex was carried on late last fall so consequently we have not tried it on gladiolus, but can see no reason why superior results should not be obtained.

Hyponex is extremely valuable for growing plants in the house. It provides all the food required. It is simple to mix this clean, odorless powder with the water you give your plants so that you know they are properly fed. Hyponex contains Vitamin B1.
The formula for Hyponex has been approved and licensed in the Agricultural Department of every State in the Union and Canada. The analysis of Hyponex is guaranteed. It will not spoil nor lose its vitality. Order Hyponex, follow directions on the package and be pleased. Include a package of Hyponex in your order for bulbs.

Chapter VII

WHOLESALE LIST

Our large acreage of gladiolus was carefully inspected for thrips, and none were found. Some feel that it is impossible for any Commercial Grower to raise gladiolus without thrips, so to set their fears at rest, this year we are using the Methyl Bromide gas treatment, which positively destroys all stages of thrips, even to the eggs. This gives you positive, undeniable protection against any possible chance of getting thrips on the bulbs we ship you.
